## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-21 are allowed.

The following is an examiner's statement of reasons for allowance:

**Claims 1, 13, 18,** and their dependent thereof, are allowed because the closest prior art, Muller (US Patent No. 6,438,375) discloses a specified time interval associated with the group. As a result, an idle mobile station belonging to that group need only leave a power saving sleep mode to receive that message during the specified group time interval, Lindskog (US Patent No. 6,622,251) discloses the wakeup PDU type can indicate to the mobile terminal that the MAC frame that is should awaken and remain awake to receive downlink data in the future, either alone or in combination, fails to disclose a system for controlling a power saving mode of a subscriber station in a wireless portable Internet system, the system comprising: a message receiver for receiving a sleep request message from the subscriber station; a message parser for parsing the sleep request message and extracting an initial sleep window that is an initial sleep window value when the subscriber station enters a sleep mode, a final sleep window that is a maximum sleep window when the subscriber station enters the sleep mode, and a subscriber station identifier; a sleep mode controller

for determining an entrance time to the sleep mode by the subscriber station which requests the sleep mode according to the initial sleep window, the final sleep window, and the subscriber station identifier for group listening intervals of a plurality of subscriber stations a grouping database for storing information on the sleep modes of the grouped subscriber stations and information on the grouped subscriber stations; a sleep mode database for storing initial sleep windows and the-final sleep windows of the grouped subscriber stations; and a message transmitter for notifying the sleep-mode-requested subscriber station of the initial sleep windows, the final sleep windows, and the entrance time to the sleep mode.

**Claim 19**, and their dependent thereof, are allowed because the closest prior art, Muller (US Patent No. 6,438,375) discloses a specified time interval associated with the group. As a result, an idle mobile station belonging to that group need only leave a power saving sleep mode to receive that message during the specified group time interval, Lindskog (US Patent No. 6,622,251) discloses the wakeup PDU type can indicate to the mobile terminal that the MAC frame that is should awaken and remain awake to receive downlink data in the future, either alone or in combination, fails to disclose a method for processing traffic indication in a power saving mode of a subscriber station in a wireless portable internet system, the

method comprising: (a) reaching a frame for processing traffic indication of a predetermined sleep group, and checking which subscriber station's sleep window is expired from among the subscriber stations configuring the predetermined sleep group; (b) checking whether corresponding subscriber stations have data to be transmitted; (c) controlling a base station to establish an indicator for traffic indication to the corresponding subscriber station when the data are found in the subscriber station; (d) transmitting a traffic indication message when the subscriber stations belonging to the group are checked and the indicator is established; and (e) detecting the subscriber stations to be in the awake mode, the subscriber stations having established the indicator indicating that the subscriber stations have the data.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
